

OMEGA

WATCH CATALOG

NORMAN M. MORRIS CORPORATION  
655 Madison Avenue, New York 21, N. Y.

## Under One Roof

THERE are literally hundreds of Swiss watches, of different makes, in the market today. How then, you might ask, has the reputation of one watch – Omega – risen so much higher above the others.

There are several good reasons, but the most important probably lies in the Omega method of manufacture. Most watches made today are assembled from mass-produced parts, bought from other manufacturers, designed to fit nearly every type of watch. Very few are actually produced and assembled under one roof. Even those few watchmakers, however, who do control the complete manufacture of their product, haven't available to them, the magnificent plant and advanced technological facilities of the completely self-contained Omega factories in Bienne and Geneva.

Here you will find the strictest supervision over every operation... constant testing... great precision in the tooling of the most minute part. Omega gauges tolerances perfectly to infinitesimal fractions... engineers each tiny spring, staff and balance wheel

for the particular watch it is designed to fit. Parts are made, not to fit all watches, but *individually* for each size movement.

Many of the incredibly precise pieces of machinery which produce the delicate Omega parts were perfected by Omega technicians and are used exclusively by Omega. Some of these inventions, in fact, are so valuable they must be kept in the strictest secrecy!

These are just a few of the reasons for the enviable reputation Omega enjoys as the timepiece of supreme accuracy. No detail has been overlooked to make it the finest watch man has produced.

## *The Race for Precision*

As early as the 16th Century, the exquisite artistry and consummate skill of Swiss watches were acclaimed throughout Europe as without peer. Superb examples of Swiss watches graced European museums — admired by connoisseurs with the art masterpieces of the period.

But the watchmakers of Switzerland were concerned with more than the appearance of the finished watch. In 1790, they started the "race for precision" by establishing awards for the watchmaker who could produce the most accurate "commercial timepiece."

This was the beginning of observatory competition — and to this day, observatory competition remains the only scientific measurement of watch accuracy. Three international observatories, Kew Teddington in England, and Geneva and Neuchatel in Switzerland, conduct these traditional accuracy competitions. All three are famed for the thoroughness of their testing standards — and at all three — Omega has consistently won the most coveted awards for accuracy!

The following list represents some of the more recent Omega awards:

- 1933 KEW TEDDINGTON** — Omega watch beats all previous records.
- 1933 GENEVA** — New Record (still unbeaten) in small pocket-watch class.
- 1936 KEW TEDDINGTON** — Omega beats its 1933 record and establishes a mark unsurpassed to this day.
- 1938 KEW TEDDINGTON** — For the fifth time in six (6) years Omega wins first place in *all* classes.
- 1944 GENEVA** — First place in small pocket-watch class (single items).
- 1945 KEW TEDDINGTON** — Omega 30mm. proved to keep more accurate time than any other watch of this size hitherto tested.
- 1946 GENEVA** — First place in wrist-watch class (single items).
- 1947 GENEVA** — Omega sets first record ever recognized in 30mm. wrist-watch class (single items) and record for same class (serial production).
- 1948 NEUCHATEL** — In extraordinary contest, Omega wins 1st place in 30mm. wrist-watch class.
- 1949 NEUCHATEL** — Seven out of first ten Chronometers are Omegas. Omega wins all three prizes in wrist Chronometer class.
- 1950 GENEVA** — Omega 30mm. establishes new precision record for single item and serial production.
- 1951 GENEVA** — An Omega 30mm. chronometer establishes the best results ever recorded by the Geneva Observatory for any wrist-watch, with a score of 870.3 out of a possible 1000, bettering the previous record set by Omega in 1950.

# OMEGA

*...Official Timekeeper of the Olympic Games*

The Olympic Games have long been known as the meeting ground of national champions, assembled in friendly competition to determine the world champions.

In a sense, the Olympics also serve to establish world-wide watch supremacy as well. Every four years, before the actual games are held, a committee representing all the competing nations decides which timepiece would most accurately time the different events.

*In 1932 at Los Angeles ... in 1936 at Berlin ... in 1948 at London ... in 1952 at Helsinki ... by unanimous choice of the competing nations, Omega was selected to time the Olympics.*

This impressive tribute to Omega accuracy is further attested by other international sport competitions which depend upon Omega timing facilities to clock their games:

*The Grands Prix of Albi (France), Assen (Holland), Helsinki (Finland) and Monza (Italy).*

*The Cycling Races of round-Austria, round-Holland, round-Mexico and round-Switzerland.*

*The Equestrian Games in Helsinki, Finland.*

*The Modern Pentathlon World Championships in Stockholm, Sweden.*

*The International Regatta in Zurich, Switzerland.*

*The World Rink-Hockey Championships in Barcelona, Spain.*

*The Skiing Contests at Holmenkollen near Oslo, Norway.*

*The Asiatic Games in New Delhi, India.*

*The Mediterranean Games in Alexandria, Egypt.*

*Omega  
World-Wide  
Service*

**F**ROM CAPETOWN TO CAIRO... from Brussels to Buenos Aires... in all the four corners of the earth... the watch that offers the most extensive world service is Omega.

For Omega is truly an international timepiece – the most widely distributed watch in the world. Its popularity knows no national boundaries... its great accuracy is acclaimed in many tongues.

Every Omega movement is serially numbered, and the records are maintained – all to facilitate perfect service wherever you may be. There is no more universally honored contract than an Omega Guarantee. In 86 different countries, authorized Omega agents are ready and qualified to give a customer's Omega the care it deserves... and to service it with genuine Omega parts.

This is of inestimable value to the world traveler. For wherever he is, he can rest assured his Omega will be serviced with equal facility – and in the shortest possible time.

**AUTOMATIC WATCHES FOR MEN**

14K yellow gold

14K yellow gold filled

When you put on an Omega Automatic, you wear a timepiece considered by fine jewelers to be the ultimate in timekeeping. Almost wafer thin, yet superbly accurate, it builds up a 36-hour power reserve after a normal day's wear—and continues to operate at peak efficiency every moment it is worn. Busy executives, professional people, statesmen—all those who are governed by time—simply put it on their wrist and forget about it! The tireless action of the “swinging weight” winds up the spring and this constant tension guarantees reliable, uniform performance—while a special Omega process guards the mainspring against overwinding and breakage. Shock-resistant and anti-magnetic, too!

*Omega—winner of the most coveted awards for accuracy at the world's leading international observatories.*

#### Men's Automatic Watches

- Left: F6238 — 14K yellow gold filled, automatic, shock-resistant, anti-magnetic, 18K gold applied dial figures \$71.50

## MEN'S AUTOMATIC, WATER-RESISTANT WATCHES

14K yellow gold  
14K yellow gold filled  
Stainless Steel

These magnificent watches of precision accuracy are perfect companions to the world traveler, the man who lives or works in areas where dust, moisture, or rapid temperature changes are prevalent. Superbly designed and perfected after exhaustive tests by over 26,000 R.A.F. pilots to withstand the highest altitudes...the hot, moist tropics...dust-laden desert storms...freezing arctic wastes. There is no finer automatic, water-resistant timepiece. Three separate and exclusive Omega patents—the Reinforced Crystal, the Screw Back, and the “Hermetic Crown”—are responsible for these super water-resistant qualities. Both movement and case expand and contract to the same degree when the temperature changes, thus preventing air and water from entering and impairing the efficiency of these finely tooled watches. These Omega precision timepieces contain the world-famous Omega automatic movement which builds up a 36-hour power reserve after a normal day's wear.

*Note: These watches will remain water-resistant so long as the crystal is not broken, the “Hermetic Crown” is not damaged or the case opened. Should repairs become necessary, they should be made only by an authorized Omega dealer to insure retention of the water-resistant properties of the watch.*

Listed below are a few of the more recent Omega  
Chronometer awards.

**KEW TEDDINGTON** — Since 1936, Omega has held the only record officially recognized with a score of 97.8 points—the closest any watch has ever come to the theoretically possible score of 100 points.

**NEUCHÂTEL** — In 1949, Omega placed highest against all competition in the three wrist chronometer classes.

**GENEVA** — In 1951, an Omega 30 mm. chronometer established the best results ever recorded by the Geneva Observatory for any wrist watch, with a score of 870.3 out of a possible 1,000, bettering the previous record set by Omega in 1950.

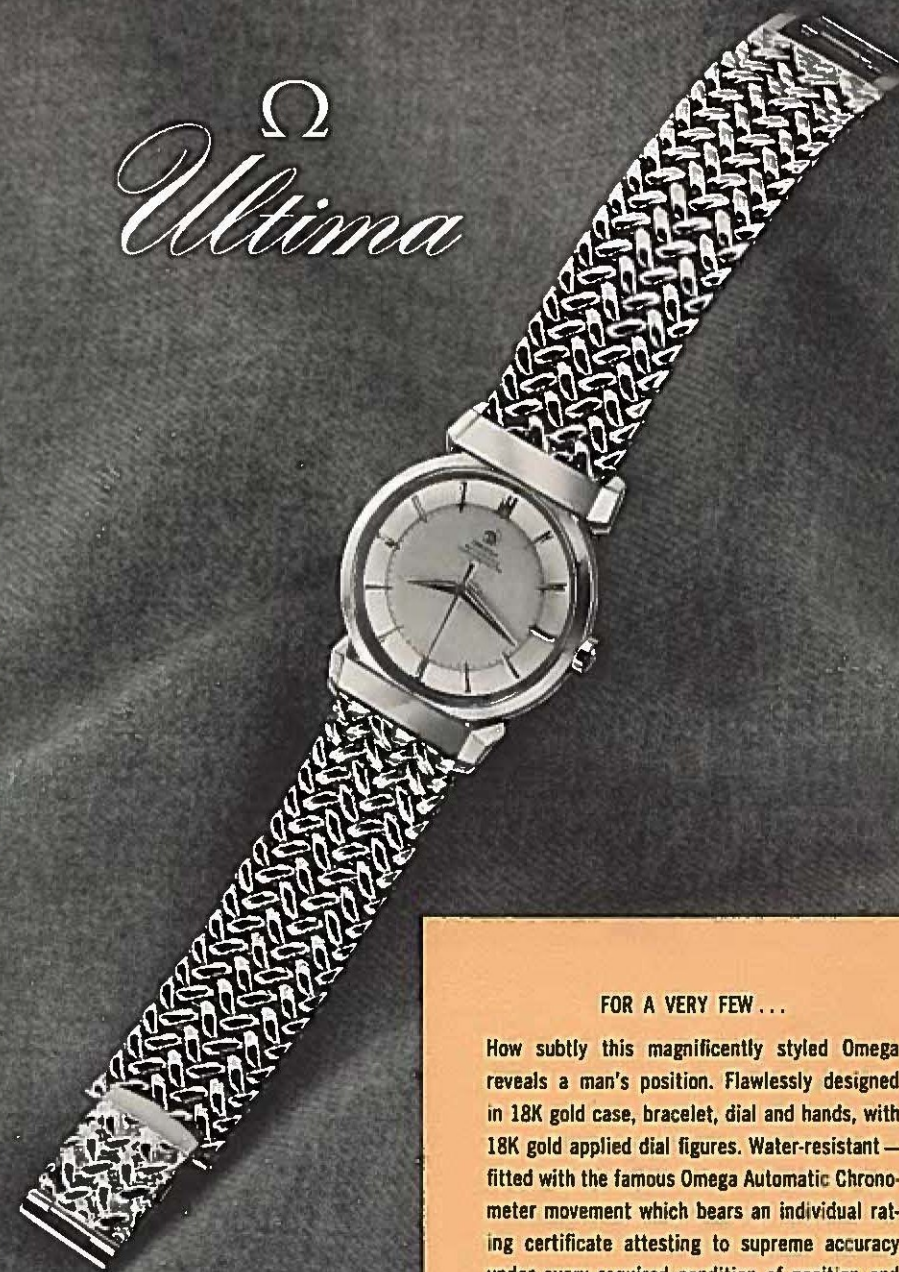

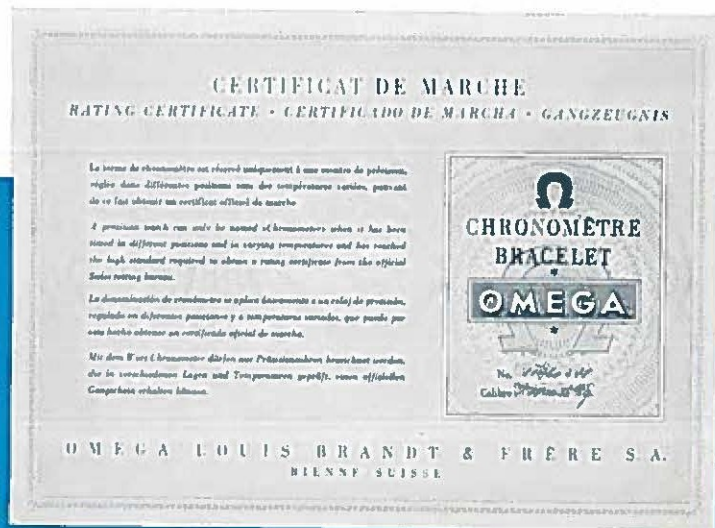

## CHRONOMETER WATCHES

18K gold cases

There are not many Omega Chronometers. Produced slowly and in very limited number, each must undergo exhaustive tests for performance. So rigorous and conclusive are these tests that recently when 5,000 Chronometers in series right off the production line were sent to the impartial Swiss Agency which judges the products of all Swiss watchmakers, every single one received the cherished "Chronometer rating certificate." Indeed — every one received a special citation for "especially fine results"!

To appreciate this amazing performance, it must be realized that up to the present, no other watch manufacturer has been able to secure Chronometer rating certificates for more than 400 out of every 1,000 watches submitted to these exact same chronometer tests!

Small wonder then that the Omega Chronometer is called "the watch with a pedigree." Each bears an individual rating certificate citing its record of unvarying accuracy under every required condition of position and temperature. These grueling tests last for a period of 15 days.

FOR A VERY FEW...

How subtly this magnificently styled Omega reveals a man's position. Flawlessly designed in 18K gold case, bracelet, dial and hands, with 18K gold applied dial figures. Water-resistant — fitted with the famous Omega Automatic Chronometer movement which bears an individual rating certificate attesting to supreme accuracy under every required condition of position and temperature. Ever disdainful of moisture... dirt... shock.....\$775 Federal Tax included

#### Men's Chronometer Watches

#### *Globemaster* CHRONOMETER

World travelers, active sportsmen and busy executives welcome the unfailing dependability of this distinguished 17 jewel self-winding Chronometer. 18K gold hands and applied figures, plus a sweep-second hand, enhance the dial. The specially constructed 18K yellow gold case protects a shock-resistant and non-magnetic movement, adjusted to the highest degree of accuracy. An official rating certificate attests its superior timekeeping accuracy.

#### POCKET WATCHES

14K yellow gold

14K yellow gold filled

Stainless Steel

With quiet good taste, these handsome Omega pocket watches introduce the elegance of the past into the modern day scene. For formal occasions in town...for spectator sports in the country...nothing will ever take the place of the traditional watch and chain. And nothing will ever surpass the Omega pocket watch for supreme accuracy...for sheer good looks.

What finer way to reward a man's years of service and devotion than to make a presentation of this most cherished of gifts.
